

## Torso, including Sheffield head

### **Description:**

The torso, including Sheffield head, fitted with the concentric breathing tube assembly, is supplied as fully described in the standards.

The torso and head assembly is moulded in cast epoxy resin and mounted on a wooden base. The breathing tubes in the head are connected to PVC tubes, which exit the torso at its lower extremity.

An optional, split, rotating collar, as described in the standards is available, for use when testing hoods,. This is machined from solid plastics and can be easily fitted to the neck of the torso assembly.

### **Services required:**

Floor mounted

### **Approximate packed size & weight:**

130 x 40 x 35 cm : 30 kg

### **Relevant standard(s):**

All European standards for respiratory protective devices that require a hood or helmet type facepiece to be supported during testing and provide for simulated breathing. For example:

EN 12941:2008, several clauses and figure A.1  
EN 13274-3:2001, clauses 6.2.4, 7.2.2 and figure A.1  
EN 14954:2005, several clauses and figure 12
